

Tabletop Blood Serum Centrifuge TD4ZB

TD4ZB can be used for normal-test of blood group serology, red blood cell washing (WRBC) , micro-column gel test, Platelet Antibody detection and Cross-match. Six joint tubes make operation simple and easy and the centrifugal

Features:

Economical: 3types of rotors can be equipped on one instrument;

Four types of rotors are available for conveniently use: Angle rotor, swing rotor for red blood cell washing, and swing rotor for micro-column gel test, swing microplates rotor.

Simple operation: 5 programs have built-in and another 10 programs can be set accordingly. Standard programs specialized for different tests of blood group serology, and more programs can be built in according to the customers requirements for normalization & standardization of clinical check and research.

Accuracy of RCF: quickly start, prompt speed reaching and automatic braking.

Time is greatly shortened for prompt determination of the result.

Parameters

Model	TD4ZB	Screen	LCD display
Max Speed	4000r/min	Max RCF	3840xg
Timer Range	0~99min	Acceleration Rate	1~9 grade
Deceleration Rate	1~9 grade	Motor	Converter motor
Noise	≤42dB(A)	Power Supply	AC220v 50Hz 5A
Dimension (LxWxH)	480x360x280mm	Weight	19kg
Rotor			
No.1 Angle rotor	12x10ml	4000r/min	2200xg
No.2 Red Cell washing Rotor	12x7ml	3000r/min	1790xg
No.3 Microcolumn Gel Card Rotor	12x6 colum	3000r/min	1790xg
